# THE POWER OF RPAs EXTENDED TO THE DESKTOP WITHOUT A POWERFUL PRICE TAG

If your organization is already utilizing Robotic Process Automation (RPA) tools, you know they're capable of providing great benefit. However, as an IT leader, you know only too well the challenges today's RPA tools can present to your department – and the rest of the company:

- Complex software that isn't user-friendly – requiring coding skills
- Expensive software licenses and server equipment
- Long-term dependency on third party consultants

These factors often make it difficult, if not impossible, to achieve the anticipated ROI from an RPA project.  They also make it more difficult for broader adoption beyond a core group of skilled specialists.

At nVoq, we take a different approach. One that's designed to maximize both ROI potential AND RPA utilization in your organization.

**Here's how:**
1. Our RPA tools platform is cloud-based. It's hosted on secure, US-based data centers compliant with PCI and HIPAA standards.
2. Our RPA tools platform is truly easy to use. It's specifically designed for and by end users, not coders.  Processes can be designed and maintained in minutes, vs. days or even months.
3. Our RPA tools platform is easy to deploy. There's nothing to install, and no equipment to buy.

In most cases, an nVoq RPA deployment can achieve same-year positive ROI, without the need for extended professional services engagements. Compare that metric with other RPA tool vendors.

With centralized, cloud-based administrative management, your COE/SSO can have total visibility and governance of RPA activity across the organization. Get the benefit of widespread RPA production at the desktop, while preserving transparency around process development and implementation.

If your organization is considering an RPA platform purchase, or if you've been underwhelmed by the outcomes from your current RPA vendor, let us show how we can help.  **Contact us today at sales@nvoq.com or call 866.383.4500**
