nVoq operates in Amazon Web Services ca-central-1 region.

nVoq operates a separate platform in the Amazon Web Services ca-central-1 region for its Canadian operations, so that customer dictation data never passes beyond the Canadian border. We operate our Canadian environment with similar applications, policies and controls as those utilized in the U.S, and they are included in the annual SOC2 Type 2 report that is undertaken by nVoq.

Any questions can be directed to nVoq Corporate at security@nvoq.com.
